

Participants

Similar to previous years, Teen programs continued to serve a higher proportion of African American youth and smaller proportion Asian/Pacific Islander youth than SFUSD. On average, African American youth received the most hours of service while White youth received the fewest hours.

DCYF Participants by Race/Ethnicity

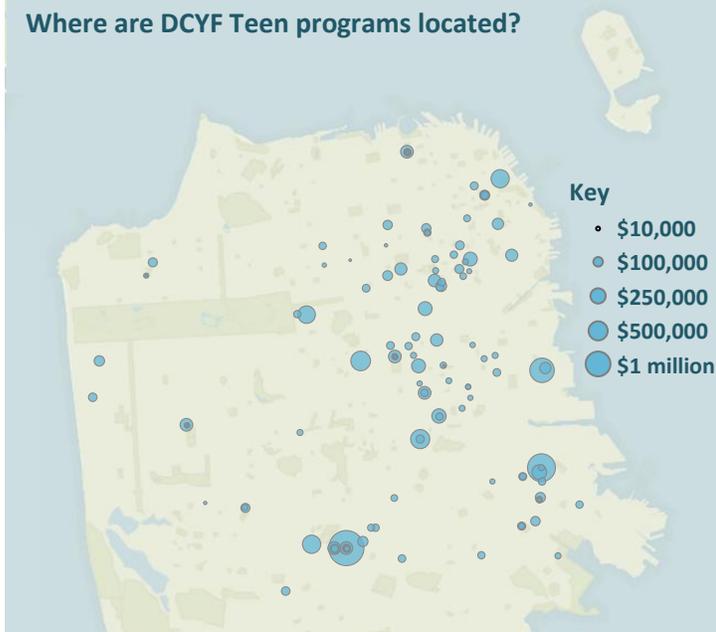

Average Hours of Service by Ethnicity

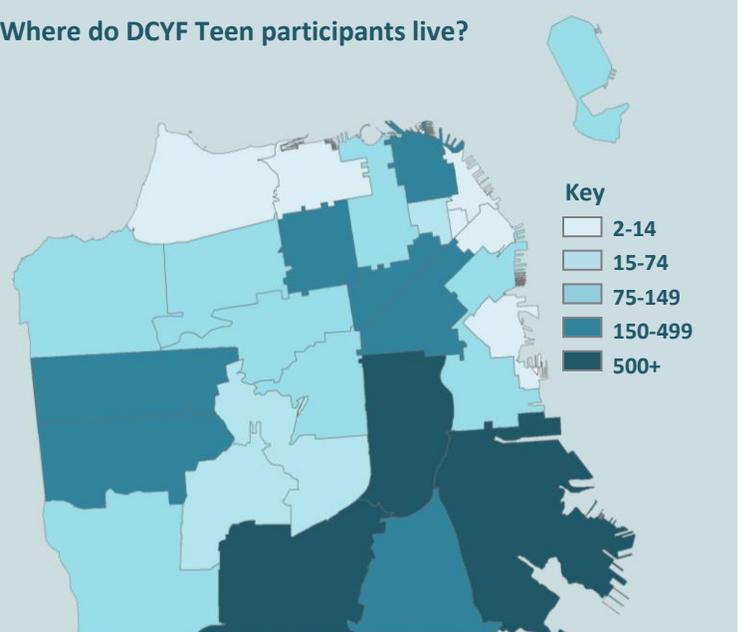

Key findings for Teen participants:

- 93% of youth served by Teen programs were youth of color, with fairly even representation of African American, Latino, and Asian/Pacific Islander youth.
- Most program participants lived in southern parts of the city (Bayview, Ingleside-Excelsior, and Visitacion Valley) and the Mission.
- Participants ranged from under 10 to over 25, with an average age of 15.7. 82% of participants were aged 13 to 17.
- Intensity of services continued to increase with an average of 93 hours, up from 85 hours in FY2012-2013. Almost 40% of participants received 80 or more hours.
- Female participants received significantly more services than male participants (100 versus 80 hours).
- Youth in programs with budgets below \$100,000 per year, fewer than 50 youth enrolled, and fewer than 3 FTE received significantly more services than youth in larger programs.

Where do DCYF Teen participants live?

Performance

There are five core DCYF program performance measures for DCYF Teen programs:

Percent of Programs Meeting DCYF Teen Performance Measures

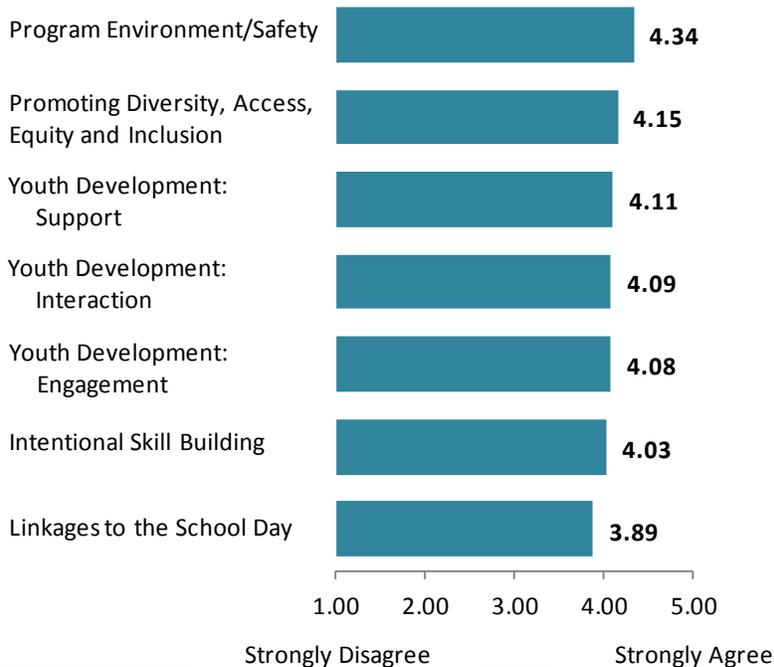

Key findings for program performance:

- Program performance improved for most measures compared to FY2012-2013.
- The only measure that showed decreases had a higher standard than in previous years: The target for enhanced enjoyment and engagement in learning increased from 60% to 75% in FY2013-2014, and the percentage of programs meeting the standard decreased from 79% to 57%.
- Programs with larger annual budgets and higher enrollment numbers were more successful in providing intensive services to projected core participants.
- Programs that enrolled fewer than 50 participants were more successful in engaging youth in their learning.

Quality

The DCYF youth survey, a consistent data source for assessing quality across program, captures quality along seven dimensions on a 5-point scale:

Average Program Quality based on Youth Survey

Key findings for program quality:

- As in previous years, youth had a positive view of quality and rated all dimensions above a 4.0 except linkages to the school day.
- Female participants rated program quality higher than male participants.
- On average, youth older than 16 Teen rated programs higher on all dimensions of quality than younger youth.
- On average, African American and Hispanic youth provided the highest ratings. White youth provided the lowest ratings in all areas except *diversity* and *safety*.
- Youth who received the DCYF target of 80 hours of service rated program quality higher than youth who received fewer than 80 hours for all areas except *safety*.

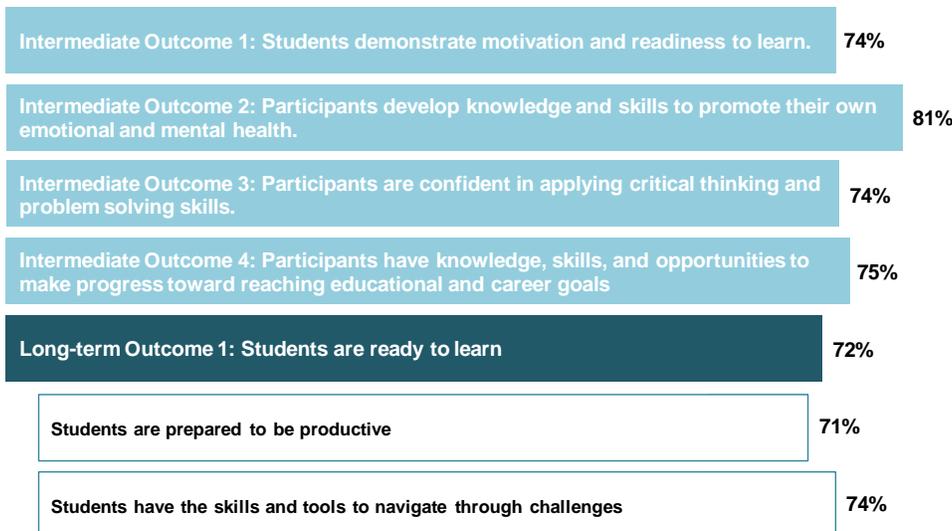

Outcomes

Reflecting the goals of the San Francisco Children’s Fund, DCYF Teen programs have two long-term outcomes with four intermediary outcomes:¹

In FY2013-2014, progress towards outcomes was measured using the youth survey:

Progress towards Outcomes based on Youth Survey

“ [An important part] is building agency around their own narrative, which turns into a social power rather than a social shame. Community-wise one of the goals is that it’s really important to have these [youth] voices to speak not only about their narrative but broader patterns and broader issues.

-Program Staff,
67 Suenos

Key findings for outcomes:

- Overall, youth reported strong progress towards intermediate outcomes and readiness to learn with a slight decrease compared to FY2012-2013.
- Youth in youth-led organizing and youth-led philanthropy programs reported experiencing significantly higher outcomes for all areas than other youth.
- Youth older than 16 and female participants reported significantly higher outcomes for all areas.
- There were no significant differences in reported outcomes by ethnicity for intermediate outcomes. For readiness to learn, African American and Hispanic youth reported the highest outcomes.
- Youth who received 80 hours or more of service reported higher intermediate outcomes.
